

Stringing Characters Together | Lesson 2

Practice: Using `.length`

Instructions

You will be provided with several predefined string variables in the [software-dev-course-the-string-dot-length-property](#) GitHub repo.

For each string, you will need to:

1. Use the `.length` property to calculate the length of the string
2. Assign the length of the string to its corresponding length variable
3. Ensure that each length variable contains the correct value

Setup

Make sure you follow all of these steps when you complete work in our GitHub repos:

- Fork the repo.
- Clone the repository to your local machine.
- Start working on the code.
- When you are finished, commit your changes and push them to your fork.

Submission

Submit the url for your GitHub repo in the field below.
